PROFILE

Backend engineer with 5+ years of professional development experience and 20+ shipped projects. I design and run production services in **Python (FastAPI, Flask)** and Node.js, backed by **PostgreSQL, MongoDB and Redis**, with asynchronous job processing on **Celery**. I containerize and deploy with **Docker and Kubernetes** and have practical experience with **AWS (Lambda, ECS, SQS)**. Strong background in large-scale browser automation and distributed multi-server systems on Linux.

TECHNICAL SKILLS

Languages	Python, JavaScript (ES6+), PHP, SQL
Backend	FastAPI, Flask, Node.js / Express, Celery, REST API design, JWT authentication, WebSockets
Templating	Jinja2, EJS, server-rendered PHP views
Databases	PostgreSQL, MongoDB, Redis, SQLAlchemy; schema design, indexing, performance tuning
Cloud & DevOps	AWS (Lambda, ECS, SQS), Docker & Docker Compose, Kubernetes, Linux (Ubuntu), Nginx, PM2, Git / GitHub
Testing & Tooling	pytest, structlog, Selenium / Playwright, AI-assisted workflows (Claude Code, Cursor)

EXPERIENCE

Freelance — Fullstack / Backend Developer 2024 — Present

- Designed and shipped **DefineBul**, a SaaS platform for topographic anomaly detection: FastAPI REST API with JWT auth, **Celery + Redis** queue for heavy GIS analysis jobs, PostgreSQL storage, structured logging and a pytest suite; packaged as separate API and worker **Docker** images.
- Built and operate Telegram-based media services (**Softlab.az**): Node.js backend, self-hosted Bot API in Docker, PM2 process management on Ubuntu servers.
- Developed a distributed booking-automation platform running across multiple Linux servers: Python workers, proxy rotation, custom CNN-based CAPTCHA recognition, centralized deployment scripts.
- Delivered cross-platform clients for the same products: desktop (Electron) and mobile (React Native).

Gurbanov Software Company (remote) 2022 — 2024

Python Developer — Backend & Automation

- Built automation pipelines and browser-automation services with Python and Selenium: web scraping, queued job processing and headless workflows.
- Deployed and operated services on AWS (Lambda, SQS) and Linux servers; monitored and maintained long-running production jobs.

SPM — Sumgait Programming Center 2020 — 2022

PHP Developer

- Developed and maintained server-rendered web applications: backend features, templating-engine views, database integrations and core application logic.

EDUCATION

Sumgait State University 2015 — 2019
Bachelor (BS), Power Machinery Engineering

LANGUAGES

Azerbaijani — native · Turkish — C1
English — intermediate (B1), technical reading & writing
